IN THE CLAIMS

Please cancel claim 1 and add new claims 13-23 as set forth below.

--13. A video data distributing system comprising:

b1
a plurality of video data storage devices storing video data linked with a video data identifier identifying the video data and transmitting to a terminal having sent the video data identifier the stored video data corresponding to the sent video data identifier;

 said terminal sending an inputted video data identifier to one of said video data storage devices and displaying the received video data according to transmission information; and

 a controller including a storing means and control means,

 wherein said storing means stores the video data identifier identifying the video data linked with identification information identifying one of said video data storage devices storing the video data, and stores identification information identifying said terminal linked

with the transmission information for sending the video data to said terminal, and

*B1
cont*

 said control means receives the terminal identification information and the video data identifier from said terminal and sends to the terminal the transmission information corresponding to the received terminal identification information and the video data storage device identification information corresponding to the received video data identifier.

--14. A video data distributing system according to claim 13, wherein said video data identifier is a URL.

--15. A video data distributing system according to claim 13, wherein said video data identifier is a unique video name.

--16. A video distributing system according to claim 13, wherein said video data identifier is a serial number.

--17. A video distributing system according to claim 13, wherein said transmission information includes a network protocol.

--18. A video distributing system according to claim 13, wherein said transmission information includes network parameters.

--19. A video distributing system according to claim 13, wherein said transmission information includes a video format.

--20. A video distributing system according to claim 13, wherein said transmission information includes an audio format.

--21. A video distributing system according to claim 13, wherein the terminal identification information is a host name and a domain name.

--22. A video distributing system according to claim 13, wherein said terminal identification information is an IP address.

--23. A video distributing method comprising the steps of:

 storing a video data identifier identifying video data linked with identification information identifying the video data storage device storing the video data;
